SUMMARY

Software Engineer with hands-on experience building **full-stack applications, backend services, and AI-powered solutions** using **React, TypeScript, Python, SQL, and REST APIs**. Experienced in developing, testing, deploying, and troubleshooting cloud-based applications using **Azure and Docker**. Strong understanding of distributed systems, API development, and modern software engineering practices.

TECHNICAL SKILLS

Languages: Python, C#, SQL, JavaScript, TypeScript, HTML/CSS

Frontend: React, TypeScript, JavaScript, HTML5, CSS

Backend & APIs: Python, FastAPI, Django, Flask, REST APIs, gRPC

Databases: PostgreSQL, MongoDB, Firebase, Redis

Cloud & DevOps: Microsoft Azure, Docker, Docker Compose, GitHub Actions, CI/CD

AI & ML: RAG, OpenAI APIs, Ollama LLaMA 3.2, Pinecone, PyTorch

Tools: Git, GitHub, Postman, Jira, VS Code

EXPERIENCE

Software Developer

Value Event Rentals

January 2026 – June 2026

Ontario, Canada

- **Built and deployed** a cloud-based full-stack platform using **React, TypeScript, and Firebase** to automate quote generation and improve operational workflows.
- **Configured and validated** application workflows and backend processes based on business requirements, ensuring reliable end-to-end functionality.
- **Integrated and tested REST APIs**, payment services, and automated notification workflows, troubleshooting integration and application issues.
- **Investigated and resolved** technical issues affecting application workflows, data processing, and user functionality to maintain reliable system performance.

Software Developer Intern

Canada Steamship Lines (CSL)

May 2025 – August 2025

Montreal, QC, Canada

- **Designed and implemented** Bronze and Silver data layers in **Azure Databricks** using **Medallion Architecture** to create clean and analytics-ready datasets.
- **Automated data ingestion** from **SharePoint to Azure Databricks** with schema validation and deduplication, improving data consistency across ETL pipelines.
- **Built C# microservices** to selectively process relevant records, reducing unnecessary compute and improving processing efficiency.
- **Collaborated** with data engineers and analysts to improve **ETL reliability, monitoring, and maintainability** across production workflows.

Research Assistant

Concordia University — [Publication](#)

September 2024 – April 2025

Montreal, QC, Canada

- **Developed and tested** an end-to-end software pipeline integrating video processing, model inference, automated processing, and multiple system components.
- **Configured and validated** experimental workflows to ensure reliable communication and correct execution across integrated components.
- **Troubleshoot** application, integration, and data-processing issues across complex technical workflows and automated repeatable processes using Python.
- **Built** a Retrieval-Augmented Generation system using **Pinecone, Ollama LLaMA 3.2, and API integrations** to support automated information retrieval.

Full-Stack Developer

Infowiz

August 2021 – June 2023

Chandigarh, India

- **Developed and maintained** web applications using Django, Python, SQL, HTML, CSS, and JavaScript.
- **Configured application functionality and SQL-backed workflows** according to business and user requirements.
- **Integrated and tested REST APIs** and optimized SQL database queries to improve application performance and reliability.
- **Investigated and debugged** software and data issues using root-cause analysis to resolve application problems.
- **Collaborated** with team members to understand requirements, resolve technical issues, and improve user experience.

PROJECTS

Event-Driven Microservices System | *RabbitMQ, Docker, GitHub Actions, MongoDB, REST APIs, CI/CD*

- **Deployed a containerized microservices architecture** on a cloud VM using **Docker and Docker Compose**, integrating User, Order, and API Gateway services with MongoDB and RabbitMQ.
- **Implemented RabbitMQ-based asynchronous messaging** to synchronize user and order data in real time, enabling resilient and loosely coupled communication between services.
- **Built an automated CI/CD pipeline using GitHub Actions** to test, build, and deploy Docker containers on code changes, improving deployment consistency and reducing manual deployment effort.
- **Implemented and tested the Strangler Pattern** through an API Gateway to dynamically route traffic between v1 and v2 services, enabling gradual migration without service disruption.

Housing Analytics – Big Data | *Python, FastAPI, PySpark, Azure, SQL, Docker*

- **Built** an end-to-end housing analytics platform using **Azure Data Factory, Azure Databricks, and Azure Data Lake Storage** to ingest, transform, and manage housing data.
- **Designed** Bronze, Silver, and Gold data layers in **Azure Databricks** and developed a **Gradient Boosted Trees** model for housing price prediction, achieving an **R² score of 0.92**.
- **Developed and tested REST APIs** using **FastAPI** to provide access to housing data, analytics, and prediction results.
- **Containerized and deployed** the application using **Docker, Azure Container Registry (ACR), and Azure App Service** for reliable cloud deployment.

EDUCATION

Concordia University

Master's in Electrical and Computer Engineering

January 2024 – December 2025

Montreal, QC, Canada

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900)

Databricks Fundamentals Accreditation
